

CONVENIENCE

THE SUITE

- ◆ Store Management Suite (SMS) is a client-based software solution that provides regional and national retailers with seamless, integrated management of the point of sale, back office, corporate office, and all aspects of the retail enterprise. The suite contains modules that are typically outsourced, including bank integration, customer analytics, in-store mobility, consumer phone apps, pump management, food service and more.

THE TECHNOLOGY

- ◆ The core of SMS is built upon three basic fundamentals: unifying touchpoints, operationalizing data analysis, and accelerating customer behavior. The foundation is rooted in solid, proven industry standards designed to offer the protection you require and the flexibility you demand. Our architecture ensures undeniable reliability, a robust feature set, and speed. The system can be personalized without changing the source code, so customization has never been easier, nor more stable. Now you too can have a solid store management system designed around your unique needs.

THE DIFFERENCE

- ◆ As conventional points of input converge with more mobile, traditionally consumer products, applications and interfaces must adapt. SMS is the premier, fully connected platform bridging yesterday with the future of retail, going beyond traditional purpose built machines, offering interactions wherever and whenever it makes most sense.

While retailing evolves, managing the merger of the brick-and-mortar and virtual outlets will become essential. Retailing is now about interconnecting all points, connecting the enterprise to the processes to the consumers.

Understand. Deliver. Thrive. That's modern retailing. That's SMS.

CONVENIENCE
